FTP Account Manager   FTP Accounts: [_____] 2 of 50 used

Your FTP Account Information

Please see the TIP section below to determine whether FTP is right for you.

FTP Server/Host Address
015c7af.netsolhost.com

Reset File Permissions
Are you having trouble uploading your files or running CGI scripts?
Resetting your file permissions might help.
For more information: Reset File Permissions

Your FTP account was successfully modified. There is up to a 10 minute processing delay before changes are applied.

Edit your login settings or select an account to log in below:

FTP User Accounts

	FTP User ID	FTP Password	Description	File Path
○	fishb0nes%1	Change	spm	/
○	smaloney%	Change	spm1	/htdocs

Edit Delete

FTP File Publisher

NOTE: If you are using the Website Builder, FTP File Publisher or File Manager you will not need to use FTP. In Website Builder, you may upload files to your site by hitting the "Publish" button. In File Manager, you can do so by hitting the "Upload" button and in FTP File Publisher, you may drag and drop files from the left hand box(your computer) to right hand box(your website).

What is FTP for?

FTP stands for File Transfer Protocol. FTP software allows you to copy files from your local computer to your web site or vice-versa.

When would you want to use FTP software?

You may want to use FTP Software when you've designed a site yourself on your computer and want to publish it to the web. You may also want to use FTP Software to upload a video to your web site, a document that you would like people to read or even to back up your entire website onto your computer.

FTP Software:

We recommend the following free programs:

For Windows® users:

SmartFTP (**Secure FTP users:** when creating a new profile, select the "SFTP over SSH" option)
FileZilla (**Secure FTP users:** when creating a new profile, select the "SFTP - SSH File Transfer Protocol" option)

For Macintosh® users:

Fetch (**Secure FTP users:** when creating a new profile, select the "SFTP" option)

Other Alternatives for Website Publishing

If you would to use a separate application to develop your website on your computer, as opposed to our Web Site Builder, We recommend:

*Adobe Dreamweaver

To use a Web Site Publishing application, you will need the FTP Server/Host Address and one of the FTP user names and passwords that are listed on this page.

Do you want to transfer files securely?

To send sensitive information you can transfer files using Secure FTP. Our Secure FTP provides encrypted channels for transferring files to and from customer websites.

How to use Secure FTP:

The third party applications that we have recommended above also support the Secure FTP protocol. You may also use the same FTP Server/Host Address and one of the FTP user names and passwords that are listed on this page.

To use FTP software, you will need the FTP Server/Host Address and one of the FTP user names and passwords that are listed on this page.
